Response:

- **128** Fire points were established in **105** IDP sites through CCCM Cluster partners.
- Awareness raising on fire mitigation conducted for **115,154** individuals.
- In coordination with other clusters, CCCM coordinated the response to the affected sites to avoid any duplications.
- **265** incidents received appropriate and timely responses out of **821** incidents.
- **182,626** individuals benefited from fire mitigation and prevention activities that involve distributing fire extinguishing , fire blankets and different fire mitigation tools.
- An average of **230,000** IDPs have benefited from activities aimed at strengthening and regularly maintaining basic infrastructure under the CCCM Cluster.

Challenges and Constraints:

- **67%** of incidents did not receive any response.
- Only **25%** of the sites affected by fires were equipped with fire extinguishers.
- Only **20%** of IDPs sites in NWS equiped with fire mitigation measures, and almost **one million** IDPs under the fire incidents risk.
- **257** IDP sites hosting **344,614** individuals are classified as "**catastrophic and extreme**" sites and located in flood-prone areas.
- Vulnerable IDP sites require the **full package of core CCCM activities** to support prevention and response to disasters and incidents expected this winter.
